

TIP OF THE WEEK

CHEWING TOBACCO EMERGENCY USES

**TERTIARY
PREPPER™**

THE PROBLEM

When no medical supplies are available, minor injuries may require field-expedient solutions.

THE SOLUTION

Use only as a last-resort poultice for minor injuries—not a substitute for proper medical care.

MATERIALS NEEDED

Chewing Tobacco
Clean cloth / gauze
Clean Water
Gloves if available
Medical tape / wrap

QUICK STEPS

- 1 Clean the area first.
- 2 Apply moist tobacco.
- 3 Cover the tobacco with a cloth
- 4 Wait 15 - 20 minutes, then remove the cloth.
- 5 Rinse the tobacco off fully.

THINGS TO REMEMBER

- ✓ Clean the wound first.
- ✓ Use only a small amount of moist chewing tobacco.
- ✓ Apply briefly and monitor for irritation.

COMMON MISTAKES

- ✗ Using dry or old tobacco.
- ✗ Leaving it on too long.
- ✗ Using on deep or serious wounds.

FIELD NOTES

- ✓ Works best as a last-resort poultice.
- ✓ Not sterile - risk of infection is real.
- ✓ Always remove and rinse thoroughly.

TERTIARY TAKEAWAY

Chewing tobacco may help with minor issues when no other options exist. It is not sterile, and is not a substitute for medical care nor should be used for serious wounds.
